

Sustainability Management

Energy Advantage's Sustainability Management solutions are a structured, integrated and sustainable approach to carbon management

Is your company faced with the challenge of quantifying greenhouse gas emissions in a transparent manner?

Does your organization have a reporting structure in place to measure and report its carbon-use?

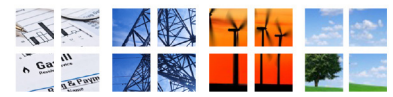

Do you know how your company is performing today and can you identify tangible goals for the future?

Stakeholders are demanding that businesses report a robust array of sustainability data in a comprehensive manner. With regulations pending, and a growing need to identify tools and best practices and implement

solutions that promote longevity, companies today are under increasing pressure to manage sustainability initiatives.

At Energy Advantage, we work closely with companies to understand how carbon use is impacting their operations, and we assess, develop, and implement structured sustainability programs.

Our solutions are consistent with best practices ISO14064 and GHG Protocol.

Sustainability Management Solutions

GHG Inventory Reporting

Conducting a GHG Inventory identifies and quantifies your emissions so you're able to monitor, analyze and track changes in emissions. Energy Advantage's solution allows you to maximize the benefits of emissions reduction initiatives, address shareholder, investor and public concerns, and continue to conduct business in an environmentally sound and sustainable manner.

GHG Reduction Strategies

We can help move your organization beyond reporting to the active management of your carbon footprint. Our GHG management planning and reduction strategy services take your organization through a structured, data-driven process that results in a GHG reduction strategy specific to the needs of your organization.

Sustainability Program Development

We will help develop policies, define goals and targets, identify measures for improvement, and formulate the appropriate reporting and compensation strategy to ensure that your sustainability program has a high adoption rate within your employee and supplier base. This is a facilitated process that closely follows our best in class TEEM methodology.

Online Sustainability Program Management

Hosted through Energy Advantage's online portal, a suite of software tools tracks, reports, audits, and analyzes your sustainability program. A full suite of operational and executive

Benefits of Sustainability Management Solutions
